Description:

Create a database & take input of student name from the user and in response user gets the details of the student.

Solution:

Code:

```
database = {"sam":"Bright student in school",
"nikhil":"average student", "ankur":"bright
student", "hemant":"good student"}
print("Enter the student name: ")
name = input()
print(name, "detail is ", database[name])
```

Output:

```
C:\Users\test\PycharmProjects\project_1\.venv\Scripts\python.exe C:\Users\test\PycharmProjects\project_1\challenge-1.py
Enter the student name:
sam
sam detail is : Bright student in school
```
